Protecting Public Drinking Water:
Source Water Protection Solutions
Crooked Creek Environmental Learning Center
142 Kerr Road
Ford City, PA 16226

Our water, our decisions, our future.

Wherever your tap water comes from, all drinking water sources are vulnerable to a wide array of contaminants. The task of providing adequate clean water is more challenging than ever before.

Yet, Americans **overwhelmingly** support strong protection for drinking water. Water suppliers can treat water through technological processes, but protecting raw water sources up front is the best line of defense to protect public health, ensure high quality drinking water, and keep treatment costs down.

Join us and learn the steps to protect Public Drinking Water

This half-day workshop will help public water suppliers, municipal officials, planners, watershed and conservation groups, educators, and residents explore:

- How land use impacts drinking water quality and treatment costs
- How communities can assess and protect the areas surrounding their drinking water sources
- How source water information can provide local leaders with valuable decision making tools for land use and open space preservation
- How residents can help in contamination prevention and education efforts
- How DEP's Source Water Protection Technical Assistance Program (SWPTAP) can provide communities with a game plan to map water supply areas, and prevent contamination before it occurs.
- Examples of drinking water protection programs
- Technical and financial resources available

- ◆ **Date: Thursday**
April 22, 2010
- ◆ **Time: 1:00 pm to 4:45 pm**
- ◆ **Location:**
Crooked Creek
Environmental Center
142 Kerr Road
Ford City, PA
- ◆ **Workshop is FREE**
and open to the public.
- ◆ **Information & Register:**
www.drinkingwaterwise.org
- ◆ **Approved for 3.5 Contact hours**
for Water Operators
Course # 1472
- ◆ **Questions?**
